2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6137.

OXUIB-1587   Reminder can not be set and missing details in shared calendars for users with no access to them
Missing folderdata because of insufficient permissions.
This has been solved by checking if event is in all public appointments folder. This way we can make some assumptions even without full folder data.

MWB-1592   Caldav configuration
Root collection path statically set to "com.openexchange.dav.prefixPath".
This has been solved by applying proper internal/external path translation for DAV root collection.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
