2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6235.

MWB-2160 High load

Excessive parsing of E-Mail addresses possibly containing CFWS personal names; e.g. "<bob@example.com> (Bob Smith)".

This has been solved by avoiding excessive parsing of E-Mail addresses possibly containing CFWS personal names.

OXUIB-2375 Appointments over multiple days not displayed correctly in mobile month view

On mobile, appointments were only added to the starting date.

Appointments now get added to every date in their duration.

MWB-2150 POP3 options fail on external accounts with higher quota than primary account

Accidental expunge of POP3 messages that could not be synced due to over-quota error.

Don't expunge messages from POP3 storage that could not be added to backing primary mail storage to solve this issue.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

MWB-2160, OXUIB-2375, MWB-2150,
