

Release Notes for Dovecot Pro Patch release 2.2.31.2

1. Shipped Products and Versions

Dovecot Pro 2.2.31.2

Including Object Storage Plug-In, Pigeonhole Sieve and Virtual Plug-In

Important Changes and Bugs fixed since previous Public Release

1.1. Virtual plugin

- **BUG DOV-1150:** Virtual folders weren't writing newly created folders correctly into the virtual index header. This made it at least more inefficient and potentially giving wrong results.
 - **FIX:** virtual: Make sure index is rewritten when new mailboxes are added

1.2. Object Storage Plug-in

- **BUG DOV-1143:** v2.2.31.1 broke metacache in tmpfs: Panic: file metacache-user.c: line 745 (metacache_user_get_device): assertion failed: (st.st_blocks > 0)
 - **FIX:** lib-metacache: Fix panic using tmpfs, which has 0 sized directories

2. Tests

The Dovecot QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
