2 General information

OX Messenger is a real time text, voice and video communication application that fully integrates into OX App Suite. OX Messenger can connect to existing third-party telephony options such as VoIP, PBX, PSTN termination etc.

The solution is based on latest web-standards such as WebRTC, HTML 5 and Websockets. This provides a single responsive user interface that automatically optimizes itself for desktops. OX Messenger also works with industry standard protocols such as SSL, XMPP, SIP and RTP and enhances OX App Suite core applications with advanced real-time communication capabilities.

OX Messenger is built to provide maximum performance, resilience and horizontal scalability. OX Messenger uses a new JAIN SLEE based XMPP Server that provides ultimate performance. The OX Messenger Gateway creates the communication between parties, but when possible it hands off the communication to a peer-to-peer protocol. This maximizes performance, reduces latency and increases both quality and privacy.

OX Messenger v1.4.1 with OX App Suite v7.8.1

This release provides an update to the OX Messenger frontend. OX Messenger v1.4.1 supports the latest design enhancements of OX App Suite v7.8.1.
