2 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 2.1.0. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

OMF-614 Source context active command fails

Fixed a JSON serialization error where the contextIdCount attribute of Window objects was not allowed to be empty, but is empty in the case of the "source context active" command.

Status: Fixed

Root Cause Description:

Description is correct: the Window.Builder checks whether contextIdCount has been set and throws an exception if not. But in the case of the "source context active" command, the JSON objects that are returned don't include a context count, because it is not relevant in that use case.

Solution Description:

Changed the Window.Builder to allow contextIdCount to be null

Severity: 3

Components: Orchestrator

Source Directory: api

cli

OMF-615 Contextmapping increment presync fails

Fix cm ip command. Add cm zp command.

Status: Fixed

Root Cause Description:

The ContextMappingRepository.incrementPresync implementation is missing the database catalog selection.

Solution Description:

Fix ContextMappingRepository.incrementPresync by adding the Connection.setCatalog() invocation

Severity: 3

Components: Scheduler

Affected Packages: open-xchange-omf-scheduler

3 Changes relevant for Operators

3.1 Changes of Behavior

Change #OMF-613 Let the Orchestrator batch the IMAP source login checking and fixing one schema at a time

Status: Done

Resolution: Done

Components: Orchestrator, Scheduler
Affected Packages: open-xchange-omf-scheduler

Change #OMF-616 Enhance Worker Sources Operations

Status: Done
Resolution: Done
Components: Orchestrator, Scheduler
Labels: zookeeper
Affected Packages: open-xchange-omf-scheduler

Change #OMF-617 Add -ago option to timestamps in TUI

Status: Done
Resolution: Done
Components: Orchestrator
Affected Packages: open-xchange-omf-scheduler

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs
