## 2 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 2.1.0. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

### OMF-537 Cannot get contexts when read/write pool ids differ

Status: Fixed

Root Cause Description:

The core DatabaseService implementation takes in an undefined database poolId, but then eventually uses a method that takes a database writepoolId. Since OMF uses the readpoolId, the lookup can fail when they differ.

Solution Description:

Manually get the contexts and schemas.

Severity: 3

Components: Source

Labels: L3

Affected Packages: open-xchange-omf-source

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs

OMF-537,
