2 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 2.1.0. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

OMF-659 Database Migration does not take changed UID into account

Status: Fixed

Root Cause Description:

The login name set during pre-prov or dual-prov on target is depending on the strategy configured on source and this is not necessarily the name of the login as stored in the database. E.g. it could be the email address instead. However, in cutover, the database content transfer will wipe out the above determined login name with whatever is stored in the login2user table on source.

Solution Description:

Since the login names on source are only stored in a single table login2user, we can just exclude that table in the database content transfer in cutover.

Severity: 1

Components: Source, Target, Worker Database

Affected Packages: open-xchange-omf-target
open-xchange-omf-worker

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
