1 General Information

1.1 Warnings

⚠️ **Warning**
This preview delivery is not for productive usage and not affected by service-level agreements.

⚠️ **Warning**
It is mandatory to restart the **open-xchange** service on all middleware nodes after performing the update.

⚠️ **Warning**
Custom configuration or template files are potentially not updated automatically. After the update, please always check for files with a **.dpkg-new** or **.rpmnew** suffix and merge the changes manually. Configuration file changes are listed in their own respective section below but don't include changes to template files. For details about all the configuration files and templates shipped as part of this delivery, please read the relevant section of each package.

1.2 Delivery Comment

This delivery was requested with following comment:

OMF Target 2.1.0 Preview Delivery 2

1.3 Install Package Repository

This delivery is part of a restricted preview software repository:

https://software.open-xchange.com/components/omf-target/preview/2.1.0/DebianBuster-7.10.4
https://software.open-xchange.com/components/omf-target/preview/2.1.0/DebianBuster-7.10.5
https://software.open-xchange.com/components/omf-target/preview/2.1.0/DebianStretch-7.10.4
https://software.open-xchange.com/components/omf-target/preview/2.1.0/DebianStretch-7.10.5
https://software.open-xchange.com/components/omf-target/preview/2.1.0/RHEL7-7.10.4
https://software.open-xchange.com/components/omf-target/preview/2.1.0/RHEL7-7.10.5

1.4 Build Dependencies

This delivery was build with following dependencies:

```
backend-7.10.5-rev11,plugins-1.6.4-rev3,cloud-plugins-1.11.4-rev4,
backend-7.10.4-rev24,backend-7.10.4-rev23
```

1.5 Notice

ℹ️ **Info**
Some configurations can be changed without restarting the service, please call following command for getting a list of supported settings.

```
/opt/open-xchange/sbin/listreloadables
```

Please use following command to enable capable and changed configurations on a running system.

```
/opt/open-xchange/sbin/reloadconfiguration
```

2 Shipped Packages and Version

2.1 Package open-xchange-omf-target

OMF Migration Target Features OX2OX Migration Framework components for the migration target system.
Version: 2.1.0-2
Type: OX Middleware Plugin
Depends on:

```
open-xchange-admin (<<7.10.6)
open-xchange-admin (>=7.10.4)
open-xchange-cloudplugins (<<1.12.0)
open-xchange-cloudplugins (>=1.11.3)
open-xchange-core (<<7.10.6)
open-xchange-core (>=7.10.4)
open-xchange-grizzly (<<7.10.6)
open-xchange-grizzly (>=7.10.4)
open-xchange-rest (<<7.10.6)
open-xchange-rest (>=7.10.4)
open-xchange-sql-client (<<1.7.0)
open-xchange-sql-client (>=1.6.0)
```

2.1.1 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-omf-target
```

2.1.2 Configuration

For details, please see appendix A
/opt/open-xchange/etc/omf-target.properties (page 6)
/opt/open-xchange/etc/sql-client.d/omf-client-pools.yaml (page 7)

2.2 Package open-xchange-omf-worker

OMF Migration Worker Features OX2OX Migration Framework components for Worker nodes.
Version: 2.1.0-2
Type: OX Middleware Plugin
Depends on:

```
open-xchange-admin (<<7.10.6)
open-xchange-admin (>=7.10.4)
open-xchange-admin-reseller (<<7.10.6)
open-xchange-admin-reseller (>=7.10.4)
open-xchange-cloudplugins (<<1.12.0)
open-xchange-cloudplugins (>=1.11.3)
open-xchange-core (<<7.10.6)
open-xchange-core (>=7.10.4)
open-xchange-sql-client (<<1.7.0)
open-xchange-sql-client (>=1.6.0)
```

2.2.1 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-omf-worker
```

2.2.2 Configuration

For details, please see appendix A
/opt/open-xchange/etc/omf-target.properties (page 9)
/opt/open-xchange/etc/omf-worker.properties (page 18)
/opt/open-xchange/etc/omf-feature-mapping.yml (page 20)
/opt/open-xchange/etc/sql-client.d/omf-client-pools.yaml (page 21)

A   Configuration Files

File 1   /opt/open-xchange/etc/omf-target.properties

```
1   ###
2   ### Target Configuration
3   ###
4
5   # Set the OMF target name of this App Suite instance/cluster.
6   # The value should be defined per brand, where the brand will be matched
7   # against the brand a context will be created in by the dual-provisioning.
8   #
9   # An example for the ficticious brand 'acme':
10  #
11  # com.openexchange.omf.target.provision.target.acme=ox_acme
12  #
13  # where 'ox_acme' must match the corresponding 'name' attribute of a Target
14  # which is configured into the Scheduler using the Orchestrator's
15  # 'omf target create' command.
16  #
17  # One may also define a fallback target name that will be used if no explicit
18  # target name property matches:
19  # com.openexchange.omf.target.provision.target._=ox_brand1
20  #
21  # Note that an empty value or one that one contains whitespaces is treated
22  # as undefined.
23  #
24  # There is no default value, but if no value is defined per-brand or as a
25  # fallback by configuration, the migration database for the respective source
26  # will be queried, first looking to match the brand name against rows in the
27  # 'target' table, and as a last resort, the only 'target' row entry if there is
28  # only one.
29  #
30  # If none of those mechanisms match, the provisioning call will fail.
31  #
32  com.openexchange.omf.target.provision.target._=
33
34  ###
35  ### REST API Credentials
36  ###
37
38  # The login of the user allowed to access the webservices
39  # Parameter is mandatory
40  com.openexchange.omf.target.basic.username=
41
42  # The password of the user allowed to access the webservices
43  # Parameter is mandatory
44  com.openexchange.omf.target.basic.password=
45
46  ###
47  ### HTTPS Client Settings
48  ###
```

```
49
50   # Location of the JKS trust store file that contains the certificates of the source and
51   # the target HTTPS endpoints.
52   # Note that this configuration setting is only applied when the URL to the source and/or
          the
53   # target App Suite endpoints are using the HTTPS protocol.
54   #
55   # The default value is empty, which causes the use of the CA certificates that are bundled
56   # with the Java Runtime Environment.
57   #
58   # Example:
59   # com.openexchange.omf.ssl.truststore.file=/opt/open-xchange/omf/worker-keystore.jks
60   #
61   # Example for using the bundled CA certificates:
62   # com.openexchange.omf.ssl.truststore.file=
63   com.openexchange.omf.ssl.truststore.file=
64
65   # The password to use to open the JKS trust store file.
66   # Only relevant when the configuration parameter above has been set.
67   # Leave empty if no password is necessary (which is the common practice and, hence, the
          default).
68   #
69   # Example with no password being needed to access the trust store file:
70   # com.openexchange.omf.ssl.truststore.password=
71   # Another example where a password is needed to access the trust store file:
72   # com.openexchange.omf.ssl.truststore.password=secret
73   com.openexchange.omf.ssl.truststore.password=
74
75   # The connect timeout for all outbound HTTP/REST requests.
76   #
77   # Example:
78   # com.openexchange.omf.http.connect.timeout=2m
79   #
80   # Defaults to 1m.
81   com.openexchange.omf.http.connect.timeout=1m
82
83   # The read timeout for all outbound HTTP/REST requests.
84   #
85   # Example:
86   # com.openexchange.omf.http.read.timeout=10m
87   #
88   # Defaults to 5m.
89   com.openexchange.omf.http.read.timeout=5m
90
91   # The write timeout for all outbound HTTP/REST requests.
92   #
93   # Example:
94   # com.openexchange.omf.http.write.timeout=10m
95   #
96   # Defaults to 5m.
97   com.openexchange.omf.http.write.timeout=5m
98
99   # The read timeout for slow outbound HTTP/REST requests.
100  #
101  # Example:
102  # com.openexchange.omf.http.slow.read.timeout=20m
103  #
104  # Defaults to 30m.
105  com.openexchange.omf.http.slow.read.timeout=30m
106
107  # The write timeout for slow outbound HTTP/REST requests.
108  #
109  # Example:
110  # com.openexchange.omf.http.slow.write.timeout=12m
111  #
112  # Defaults to 30m.
113  com.openexchange.omf.http.slow.write.timeout=30m
114
115  ###
116  ### Migration Database
117  ###
118
```

```
119    # The OMF target migration db url
120    # Should be in the format jdbc:mysql://mysql.example.com/migration
121    # Default: <empty>
122    com.openexchange.omf.target.sql.migration.url=
123
124    # The OMF target migration db user
125    # Default: <empty>
126    com.openexchange.omf.target.sql.migration.user=
127
128    # The OMF target migration db password
129    # Default: <empty>
130    com.openexchange.omf.target.sql.migration.password=
131
132    ###
133    ### File Migration Settings
134    ###
135
136    # Global Number of requests going to the source system
137    com.openexchange.omf.target.files.migration.concurrency.global.limit=25
138
139    # Number of requests going to the source system that are initiated by a single inbound
           request
140    com.openexchange.omf.target.files.migration.concurrency.single.limit=5
141
142    ###
143    ### Provisioning Configuration
144    ###
145    #
146    # Configuration required for the premigration mappings
147    #
148    #com.openexchange.omf.target.premigration.[reseller].password=
```

File 2   /opt/open-xchange/etc/sql-client.d/omf-client-pools.yaml

```
1     # The top-level key is the identifier of the pool, which can be
2     # any string of text and is being used by the bundles and applications
3     # to access that pool configuration.
4     # Typically, those are fixed or need to be configured in the bundles
5     # that use this library.
6     #
7     # When Java Security Manager support is enabled, files that are referenced
8     # in these configuration files must be in a directory that is already
9     # whitelisted, or in a subdirectory thereof, such as
10    # /opt/open-xchange/etc/
11    #
12    # A good candidate would be something along the lines of
13    # /opt/open-xchange/etc/sql-files/
14    #
15    # Otherwise, the filename or its directory must be put into a new .list
16    # file in the folder
17    # /opt/open-xchange/etc/security/
18    # with e.g. the following content:
19    #
20    # file:/etc/trust.jks
21    #
22    # For a complete list of property values, read https://github.com/brettwooldridge/HikariCP
23    omf-migration:
24      # This property directs HikariCP to use "DriverManager-based" configuration.
25      # We feel that DataSource-based configuration (above) is superior for a variety of
            reasons (see below), but for many deployments there is little significant difference
            .
26      # When using this property with "old" drivers, you may also need to set the
            driverClassName property, but try it first without.
27      # Note that if this property is used, you may still use DataSource properties to
            configure your driver and is in fact recommended over driver parameters specified in
            the URL itself.
28      # Default: none
29      jdbcUrl: ${com.openexchange.omf.target.sql.migration.url}
```

```
30    # This property sets the default authentication username used when obtaining Connections
          from the underlying driver.
31    # Note that for DataSources this works in a very deterministic fashion by calling
          DataSource.getConnection(*username*, password) on the underlying DataSource.
32    # However, for Driver-based configurations, every driver is different.
33    # In the case of Driver-based, HikariCP will use this username property to set a user
          property in the Properties passed to the driver's DriverManager.getConnection(
          jdbcUrl, props) call.
34    # If this is not what you need, skip this method entirely and call addDataSourceProperty
          ("username", ...), for example.
35    # Default: none
36    username: ${com.openexchange.omf.target.sql.migration.user}
37    # sets the password of the connection
38    password: ${com.openexchange.omf.target.sql.migration.password}
39    # This property controls the minimum number of idle connections that HikariCP tries to
          maintain in the pool.
40    # If the idle connections dip below this value and total connections in the pool are
          less than maximumPoolSize, HikariCP will make a best effort to add additional
          connections quickly and efficiently.
41    # However, for maximum performance and responsiveness to spike demands, we recommend not
          setting this value and instead allowing HikariCP to act as a fixed size connection
          pool.
42    # Default: same as maximumPoolSize
43    minimumIdle: 0
44    # This property controls the maximum size that the pool is allowed to reach, including
          both idle and in-use connections.
45    # Basically this value will determine the maximum number of actual connections to the
          database backend. A reasonable value for this is best determined by your execution
          environment.
46    # When the pool reaches this size, and no idle connections are available, calls to
          getConnection() will block for up to connectionTimeout milliseconds before timing
          out.
47    # Default: 10
48    maximumPoolSize: 10
49    # This property controls the maximum number of milliseconds that a client
50    # (that's you) will wait for a connection from the pool. If this time is exceeded
51    # without a connection becoming available, a SQLException will be thrown. Lowest
52    # acceptable connection timeout is 250 ms. Default: 30000 (30 seconds)
53    connectionTimeout: 15000
54    # the dataSourceProperties configures the driver configured above using the jdbcUrl
55    # (some) networking related parameters don't seem to work using mysql (what we are using
          ), see
56    # https://github.com/brettwooldridge/HikariCP#popular-datasource-class-names
57    dataSourceProperties:
58      useUnicode: true
59      characterEncoding: UTF-8
60      useTimezone: true
61      serverTimezone: UTC
62      useSSL: false
63      requireSSL: false
64      verifyServerCertificate: false
65      enabledTLSProtocols: TLSv1,TLSv1.1,TLSv1.2
```

File 3   /opt/open-xchange/etc/omf-target.properties

```
1    ###
2    ### Target Configuration
3    ###
4
5    # Set the OMF target name of this App Suite instance/cluster.
6    # The value should be defined per brand, where the brand will be matched
7    # against the brand a context will be created in by the dual-provisioning.
8    #
9    # An example for the ficticious brand 'acme':
10   #
11   # com.openexchange.omf.target.provision.target.acme=ox_acme
12   #
13   # where 'ox_acme' must match the corresponding 'name' attribute of a Target
```

```
14   # which is configured into the Scheduler using the Orchestrator's
15   # 'omf target create' command.
16   #
17   # One may also define a fallback target name that will be used if no explicit
18   # target name property matches:
19   # com.openexchange.omf.target.provision.target._=ox_brand1
20   #
21   # Note that an empty value or one that one contains whitespaces is treated
22   # as undefined.
23   #
24   # There is no default value, but if no value is defined per-brand or as a
25   # fallback by configuration, the migration database for the respective source
26   # will be queried, first looking to match the brand name against rows in the
27   # 'target' table, and as a last resort, the only 'target' row entry if there is
28   # only one.
29   #
30   # If none of those mechanisms match, the provisioning call will fail.

```

File 4   /opt/open-xchange/etc/omf-worker.properties

```
1    # The OMF Worker configuration mode.
2    #
3    # Options:
4    #  1. local - uses local configuration files. This is useful for single
5    #     worker node OMF platforms.
6    #  2. distributed - uses the Zookeeper distributed configuration
7    #     to distribute the same configuration among all workers in a group.
8    #     This provider creates a single connection to the Zookeeper worker
9    #     group config node and listens for updates.
10   #
11   # Default: "local"
12   #
13   com.openexchange.omf.worker.config.mode=
14
15   ###
16   ### ZooKeeper Configuration
17   ###
18
19   # The Zookeeper server address that the client will connect to
20   #
21   # This property is required
22   #
23   # Example: localhost:2181
24   #
25   com.openexchange.omf.worker.zookeeper.address=
26
27   # The Zookeeper worker group id. Identifies the group that this worker
28   # belongs to. All worker nodes servicing the same migration should
29   # use the same id. Worker group member nodes will be created here
30   # and the configuration for this group will be used for this worker.
31   #
32   # Default value: default
33   #
34   # Example: customer1
35   #
36   com.openexchange.omf.worker.zookeeper.group.id=
37
38   # The Worker's id. Identifies the worker within a group of workers.
39   # This should be unique within a worker group. This id will be used
40   # as the member id for the worker GroupMember management.
41   #
42   # Default value: the hostname
43   #
44   # Example: worker1
45   #
46   com.openexchange.omf.worker.zookeeper.member.id=
47
48   # The Zookeeper authentication user
49   #
50   # This property is optional
51   #
52   # Example: user
53   #
54   com.openexchange.omf.worker.zookeeper.auth.user=
55
56   # The Zookeeper authentication password
57   #
58   # This property is optional
59   #
60   # Example: password
61   #
62   com.openexchange.omf.worker.zookeeper.auth.password=
63
64   ###
65   ### Sources
66   ###
67
68   # The source(s) that this worker services.
69   # This property tells the worker to collect migration batches for the
70   # specified source name(s) and determines the Kafka topics the worker
71   # listens on, each source name bein prefixed with "omf-batch-" to translate
```

```
72   # into a topic name (e.g. a source named "source1" will cause the worker
73   # to listen on a Kafka topic "omf-batch-source1").
74   #
75   # This property is comma delimited and may contain whitespaces between
76   # entries.
77   # This property is required.
78   # It is applied dynamically upon configuration reloading.
79   # Acceptable values are one or more source names.
80   #
81   # Example: source1, source2
82   #
83   com.openexchange.omf.worker.sources=
84
85   ###
86   ### Migration Database
87   ###
88   #
89   # Note that the following properties (com.openexchange.omf.workr.sql.migration.*)
90   # merely act as placeholders that are used in omf-client-pools.yaml
91   # Further customization of the database connections to the migration databases may
92   # be customized there and if these properties are not used as placeholders,
93   # changing them here won't have any effect.
94   #
95
96   # The JDBC URI to use to connect to the OMF worker migration database.
97   # Should be in the format jdbc:mysql://omf-migration-db/
98   # This property is mandatory and has no default value.
99   com.openexchange.omf.worker.sql.migration.url=
100
101  # The username to use to connect to the OMF worker migration database.
102  # This property is mandatory and has no default value.
103  com.openexchange.omf.worker.sql.migration.user=
104
105  # The password to use to connect to the OMF worker migration database.
106  # This property is mandatory and has no default value.
107  com.openexchange.omf.worker.sql.migration.password=
108
109  ###
110  ### HTTPS Client Settings
111  ###
112
113  # Location of the JKS trust store file that contains the certificates of the source and
114  # the target HTTPS endpoints.
115  # Note that this configuration setting is only applied when the URL to the source and/or
         the
116  # target App Suite endpoints are using the HTTPS protocol.
117  #
118  # The default value is empty, which causes the use of the CA certificates that are bundled
119  # with the Java Runtime Environment.
120  #
121  # Example:
122  # com.openexchange.omf.ssl.truststore.file=/opt/open-xchange/omf/worker-keystore.jks
123  #
124  # Example for using the bundled CA certificates:
125  # com.openexchange.omf.ssl.truststore.file=
126  com.openexchange.omf.ssl.truststore.file=
127
128  # The password to use to open the JKS trust store file.
129  # Only relevant when the configuration parameter above has been set.
130  # Leave empty if no password is necessary (which is the common practice and, hence, the
         default).
131  #
132  # Example with no password being needed to access the trust store file:
133  # com.openexchange.omf.ssl.truststore.password=
134  # Another example where a password is needed to access the trust store file:
135  # com.openexchange.omf.ssl.truststore.password=secret
136  com.openexchange.omf.ssl.truststore.password=
137
138  # The connect timeout for all outbound HTTP/REST requests.
139  #
140  # Example:
141  # com.openexchange.omf.http.connect.timeout=2m
```

```
142  #
143  # Defaults to 1m.
144  com.openexchange.omf.http.connect.timeout=1m
145
146  # The read timeout for all outbound HTTP/REST requests.
147  #
148  # Example:
149  # com.openexchange.omf.http.read.timeout=10m
150  #
151  # Defaults to 5m.
152  com.openexchange.omf.http.read.timeout=5m
153
154  # The write timeout for all outbound HTTP/REST requests.
155  #
156  # Example:
157  # com.openexchange.omf.http.write.timeout=10m
158  #
159  # Defaults to 5m.
160  com.openexchange.omf.http.write.timeout=5m
161
162  # The read timeout for slow outbound HTTP/REST requests.
163  #
164  # Example:
165  # com.openexchange.omf.http.slow.read.timeout=20m
166  #
167  # Defaults to 30m.
168  com.openexchange.omf.http.slow.read.timeout=30m
169
170  # The write timeout for slow outbound HTTP/REST requests.
171  #
172  # Example:
173  # com.openexchange.omf.http.slow.write.timeout=12m
174  #
175  # Defaults to 30m.
176  com.openexchange.omf.http.slow.write.timeout=30m
177
178  ###
179  ### User Quota Settings
180  ###
181
182  # The mode for user quota.
183  # Allowed values are user, context, keep
184  # If user is selected, user quota will be set during premigration of users
185  # If context quota is selected, no user quota will be set and existing user quota will be
         stripped
186  # If keep is selected, the user quota will not be touched and the existing value will be
         used on the target
187  # Default: user
188  com.openexchange.omf.worker.premigration.user.quota.mode=user
189
190  # Setting to control the behaviour when user.quota.mode is set to user.
191  # If set to true, will keep the existing value of the user if present and above 0
192  # if set to false, will use the configured default user.quota.defaultQuota
193  # Default: false
194  com.openexchange.omf.worker.premigration.user.quota.keepIfPresent=false
195
196  # The default Quota for a user, if the user.quota.mode is set to user
197  # Default: 1000L
198  com.openexchange.omf.worker.premigration.user.quota.defaultQuota=1000
199
200  # What should be the value of the LDAP attribute oxDeliveryStatus for pre-provisioned
         users?
201  # Default: ORIGINAL
202  com.openexchange.omf.worker.premigration.user.deliveryStatus=ORIGINAL
203
204  # That value can be overridden by target brand
205  # com.openexchange.omf.worker.premigration.user.deliveryStatus.[brandName]=...
206  # e.g.:
207  # com.openexchange.omf.worker.premigration.user.deliveryStatus.targetBrand1=ORIGINAL
208  # When no per-target-brand value is defined here, the value of
209  # com.openexchange.omf.worker.premigration.user.deliveryStatus
210  # will be used as the default/fallback.
```

```
211
212    ###
213    ### Kafka Configuration
214    ###
215    #
216    # OMF Workers are both Kafka Consumers and Producers:
217    # * the OMF Worker uses a Kafka Consumer to poll jobs from Kafka job
218    #   queues ("omf-batch-${sourceName}")
219    # * the OMF Worker uses a Kafka Producer to send job responses to the
220    #   job response queue ("omf-response")
221    #
222    # Use the official Apache Kafka configuration documentation
223    # for all required and optional properties as well as defaults:
224    #   Producer: https://kafka.apache.org/documentation/#producerconfigs
225    #   Consumer: https://kafka.apache.org/documentation/#consumerconfigs
226    #
227    # The following Producer properties are automatically set by the
228    # worker and cannot be used here:
229    #  - key.serializer
230    #  - value.serializer
231    #  - acks
232    #  - retries
233    #  - client.id
234    #  - enable.idempotence
235    #
236    # The following Consumer properties are automatically set by the
237    # worker and cannot be used here:
238    #  - key.deserializer
239    #  - value.deserializer
240    #  - enable.auto.commit
241    #  - max.poll.records
242    #  - auto.commit.interval.ms
243    #  - group.id
244    #  - group.instance.id
245    #  - client.id
246    #
247    # Properties of the OMF Producer are prefixed with "kafka.producer."
248    #   Ex: "kafka.producer.bootstrap.servers"
249    #
250    # Properties of the OMF Consumer are prefixed with "kafka.consumer."
251    #   Ex: "kafka.consumer.bootstrap.servers"
252    #
253    # Properties shared between the producer and consumer can either
254    # be set individually, or using the prefix "kafka.". However, if the
255    # property is set with the producer or consumer prefix, those will
256    # supersede the common property.
257    #   Ex: "kafka.bootstrap.servers"
258    #
259
260    ###
261    ### Cloud-Plugins Settings
262    ###
263
264    # The mode for user quota.
265    # Allowed values are user, remove, keep
266    # If user is selected, user quota will be set during premigration of users to a
            configureable default
267    # If remove quota is selected, no user quota will be set and existing user quota will be
            stripped
268    # If keep is selected, the user quota will not be touched and the existing value will be
            used on the target if present
269    # Default: user
270    com.openexchange.omf.worker.cloudplugins.user.quota.mode=user
271
272    # Setting to control the behaviour when user.quota.mode is set to user.
273    # If set to true, will keep the existing value of the user if present and above 0
274    # if set to false, will use the configured default user.quota.defaultQuota
275    # Default: true
276    com.openexchange.omf.worker.cloudplugins.user.quota.keepIfPresent=true
277
278    # The default quota for a user, if the user.quota.mode is set to user
279    # Default: 1000
```

13

```
280  com.openexchange.omf.worker.cloudplugins.user.quota.defaultQuota=1000
281
282  # Whether to always set the oxDeliveryStatus attribute to HOLD prior to performing
283  # the cutoff (when set to "true"), or only doing so when the current value of the
284  # oxDeliveryStatus attribute is neither empty, OXAAS or BLOCKED (when set to "false").
285  # When this configuration setting is set to "false", and the oxDeliveryStatus
286  # attribute of at least one of the users of a context is set to OXAAS or empty,
287  # then that context will not be migrated.
288  # Use this to avoid overwriting already migrated contexts, as an additional verification
289  # to the context mapping table.
290  #
291  # Default: false
292  com.openexchange.omf.worker.cloudplugins.status.hold.overwrite=false
293
294  # When the migration of a context fails during cutoff, its oxDeliveryStatus attribute
295  # is set back to its original value when
296  # com.openexchange.omf.worker.logic.keep.deliveryStatus
297  # is set to true in omf-worker-logic.properties.
298  #
299  # This attribute controls whether setting it back to OXAAS or empty should be allowed
300  # (when set to false), or whether its value should be overriden with another value
301  # (when set to true).
302  # When this configuration property is set to true, the value with which oxDeliveryStatus
303  # should be overridden in case of context cutoff migration failure when it's previous
304  # value was empty or OXAAS is defined in
305  # com.openexchange.omf.worker.cloudplugins.status.enforce.failed.migration.with
306  #
307  # Default: true
308  com.openexchange.omf.worker.cloudplugins.status.enforce.failed.migration=true
309
310  # The value with which to override the oxDeliveryStatus after a failed cutoff migration
311  # if its original value was empty or OXAAS and
312  # com.openexchange.omf.worker.cloudplugins.status.enforce.failed.migration
313  # is set to true.
314  #
315  # Default: ORIGINAL
316  com.openexchange.omf.worker.cloudplugins.status.enforce.failed.migration.with=ORIGINAL
317
318  ###
319  ### File Migration Settings
320  ###
321
322  # Whether to parellelize the various file/filestore related operations:
323  # - synchronizing (downloading and uploading) of files
324  # - updating of filestores quotas
325  # - updating of filestore references
326  # - updating of file references
327  #
328  # There are multiple options:
329  #
330  # 1. off: the file related operations are not parellelized and, instead,
331  #    executed sequentially (one context at a time);
332  #    example:
333  #    com.openexchange.omf.worker.files.parallel.threads=off
334  #
335  # 2. auto: the operations are parallelized, with as many threads in parallel
336  #    as there are CPU cores;
337  #    example:
338  #    com.openexchange.omf.worker.files.parallel.threads=auto
339  #
340  # 3. a number: the operations are parallelized, with as many thrads in
341  #    parallel as specified with that number
342  #    example:
343  #    com.openexchange.omf.worker.files.parallel.threads=4
344  #
345  # Optional. Default: auto
346  com.openexchange.omf.worker.files.parallel.threads=auto
347
348  # Wether to check for missing files on source in the cutover phase
349  #
350  # When enabled, an error will be logged for missing files
351  #
```

```
352   # Note that the migration would be stopped anyway on a missing file on the
353   # source because the file could not be migrated as part of the normal preSync
354   # or cutover.
355   com.openexchange.omf.worker.files.check.source.missingFiles=false
356
357   # Wether to check for missing files on the target in the cutover phase
358   #
359   # When enabled, an error will be logged for missing files. The check
360   # will compare all fileRefs in the database with the configured fileStorage
361   # and if any of the fileRefs is missing, an exception is thrown.
362   com.openexchange.omf.worker.files.check.target.missingFiles=false
363
364   ###
365   ### Worker Behavior Configuration
366   ###
367
368   # Whether to update the oxDeliveryStatus attribute in oxCloudUser
369   # entities in the target LDAP (true) or not (false).
370   # Optional, defaults to true.
371   com.openexchange.omf.worker.logic.update.deliveryStatus=true
372
373   # When updating the oxDeliveryStatus is enabled (*), this flag configures
374   # whether, in case of the failure of the migration of a context, the
375   # oxDeliveryStatus attribute of all the users within that context should
376   # be set to:
377   # - true = their value prior to the migration (true),
378   # - false = the value 'ORIGINAL' (**)
379   #
380   # (*) see com.openexchange.omf.worker.logic.update.deliveryStatus above
381   # (**) or the value defined in com.openexchange.omf.worker.logic.failed.deliveryStatus
382   #
383   # Optional, defaults to false
384   com.openexchange.omf.worker.logic.keep.deliveryStatus=false
385
386   # When overwriting oxDeliveryStatus with a fixed value in case of a failed
387   # cutover of a context (*), this configuration setting indicates whether
388   # that oxDeliveryStatus value should be 'ORIGINAL' or another value.
389   #
390   # Note that if the value is different from ORIGINAL, OXAAS, HOLD
391   # or BLOCKED, it requires the use of a Cloud-Plugins version that supports
392   # arbitrary oxDeliveryStatus values -- see CP-259
393   #
394   # (*) com.openexchange.omf.worker.logic.keep.deliveryStatus=true
395   #
396   # Optional, defaults to ORIGINAL
397   com.openexchange.omf.worker.logic.failed.deliveryStatus=ORIGINAL
398
399   # Default maximum duration for a Batch, if it doesn't have a deadline
400   # attached to its Window.
401   # Set it to the value "none" to avoid applying a maximum duration (if there
402   # is no Window deadline), like so:
403   # com.openexchange.omf.worker.batch.default.max.duration=none
404   # Optional, defaults to 1h.
405   com.openexchange.omf.worker.batch.default.max.duration=1h
406
407   # Whether to unlock successfully migrated contexts on the source.
408   # Optional, defaults to false
409   com.openexchange.omf.worker.logic.unlock.successful.source=false
410
411   # Maximum amount of times we attempt to unlock the source contexts after
412   # a failed delta-sync Batch migration.
413   # Optional, defaults to 3
414   com.openexchange.omf.worker.logic.max.unlock.attempts=3
415
416   # Minimum amount of contexts that must survive a step in a batch
417   # disabled if set to 0
418   # Default: 1
419   com.openexchange.omf.worker.logic.keep.going.min=1
420
421   # Percentage of contexts that must succeed a step in a batch
422   # disabled if set to 0
423   # Must be between 0 and 100
```

```
424   # Default: 50
425   com.openexchange.omf.worker.logic.keep.going.percentage=50
426
427   ###
428   ### Mail Migration Properties
429   ###
430   # These contain several "source" based properties which
431   # are used by OMF to determine how to migrate a user based on
432   # the settings for the "source" that they belong to.
433   # The "source" is referred to as both the OMF "source" and the mail
434   # "source" which may be different. Some OMF source based properties
435   # are dependent on the DMF "brand". For instance, the mail source host
436   # default property value must be a source host that is configured in
437   # DMF for the "brand" that the source matches.
438
439   # The interval in ms that OMF will poll the DMF
440   # API to check the user migration status during
441   # presync
442   #
443   # This configuration property is optional.
444   #
445   # Default: 30000
446   #
447   # Example:
448   # com.openexchange.omf.worker.mail.presync.poll.interval.ms=30000
449   com.openexchange.omf.worker.mail.presync.poll.interval.ms=
450
451   # The interval in ms that OMF will poll the DMF
452   # API to check the user migration status during
453   # cutover
454   #
455   # This configuration property is optional.
456   #
457   # Default: 2000
458   #
459   # Example:
460   # com.openexchange.omf.worker.mail.cutover.poll.interval.ms=2000
461   com.openexchange.omf.worker.mail.cutover.poll.interval.ms=
462
463   # Set the default source mail host per OMF source
464   #
465   # Use property names that start with
466   # "com.openexchange.omf.worker.mail.source.host."
467   # followed by the OMF source name.
468   #
469   # A source mail host is not required for any OMF source,
470   # however, if there is not a default and a host
471   # is not provided with the Appsuite source metadata then the
472   # migration will fail
473   #
474   # Example:
475   # com.openexchange.omf.worker.mail.source.host.source1=imap.host.name
476   # com.openexchange.omf.worker.mail.source.host.source2=imap.host.name
477
478   # Set the default source mail host port per OMF source
479   #
480   # Use property names that start with
481   # "com.openexchange.omf.worker.mail.source.port."
482   # followed by the OMF source name.
483   #
484   # A source mail host port is not required for any OMF source,
485   # and is only used to forward to DMF. It is possible that DMF
486   # is configured to not make use of the source host port option
487   # which would make this property useless for that OMF source.
488   #
489   # Example:
490   # com.openexchange.omf.worker.mail.source.port.source1=143
491   # com.openexchange.omf.worker.mail.source.port.source2=993
492
493   # Set the default source mail password per OMF source
494   #
495   # Use property names that start with
```

```
496   # "com.openexchange.omf.worker.mail.source.password."
497   # followed by the OMF source name.
498   #
499   # A source mail password is not required for any OMF source,
500   # and is only used to forward to DMF. It is possible that DMF
501   # is configured to not make use of the source password option
502   # which would make this property useless for that OMF source.
503   #
504   # Example:
505   # com.openexchange.omf.worker.mail.source.password.source1=secret
506   # com.openexchange.omf.worker.mail.source.password.source2=secret2
507
508   # Set the default imapc ssl option per OMF source
509   #
510   # Use property names that start with
511   # "com.openexchange.omf.worker.mail.imapc.ssl."
512   # followed by the OMF source name.
513   #
514   # There are 3 options:
515   #  1. "no"
516   #  2. "imaps"
517   #  3. "starttls"
518   #
519   # An imapc ssl option is not required for any OMF source,
520   # and is only used to forward to DMF. It is possible that DMF
521   # is configured to not make use of the imapc ssl option
522   # which would make this property useless for that OMF source.
523   #
524   # Example:
525   # com.openexchange.omf.worker.mail.imapc.ssl.source1=no
526   # com.openexchange.omf.worker.mail.imapc.ssl.source2=imaps
527
528   ###
529   ### DMF Client Properties
530   ###
531
532   # OMF talks to DMF via an apikey that is linked to a DMF "brand".
533   # An OMF "source" is one-one with a DMF "brand". This means that
534   # the apikey set for an OMF source should match up with the desired
535   # DMF brand.
536
537   # The DMF HTTP API URL. This is the URL without the API version.
538   # So if the versioned API URL is: https://dmf.host/dmf/v1
539   # then the URL to provide is "https://dmf.host/dmf"
540   #
541   # This configuration property is required.
542   #
543   com.openexchange.omf.worker.mail.dmf.url=
544
545   # Set the API key per source
546   #
547   # Use property names that start with
548   # "com.openexchange.omf.worker.mail.dmf.apikey."
549   # followed by the source name.
550   #
551   # An API key is required for any source that will be
552   # serviced by this OMF instance.
553   #
554   # Example:
555   # com.openexchange.omf.worker.mail.dmf.apikey.source1=XYZ
556   # com.openexchange.omf.worker.mail.dmf.apikey.source2=ABC
557   #
558
559   # When the target brand is configured as being dynamic ('*'), then the
560   # target brand must be provided by the source metadata.
561   # The following configuration properties can be used to map the brand
562   # names in the source metadata to different values before being used as
563   # the target brand name for preprovisioning.
564   #
565   # Syntax:
566   # com.openexchange.omf.worker.premigration.brand.map.<from>=<to>
567   #
```

```
568   # Example:
569   # com.openexchange.omf.worker.premigration.brand.map.brand1=reseller
570   #
571   # These properties are optional and the default behavior is to use the
572   # brand name in the source metadata as-is.
573   # com.openexchange.omf.worker.premigration.brand.map.<from>=<to>
574
575   # A default target brand to use when the target brand is configured as being
576   # dynamic ('*') and no target brand is specified in the source metadata.
577   #
578   # The property is optional and when not defined or blank, the brand must
579   # be part of the source metadata or the preprovisioning will fail.
580   #
581   com.openexchange.omf.worker.premigration.brand.default=
582
583   # Whether to parellelize the various premigration related operations:
584   # - creation of context
585   # - verification of contexts on the target
586   #
587   # There are multiple options:
588   #
589   # 1. off: the file related operations are not parellelized and, instead,
590   #    executed sequentially (one context at a time);
591   #    example:
592   #    com.openexchange.omf.worker.premigration.parallel.threads=off
593   #
594   # 2. auto: the operations are parallelized, with as many threads in parallel
595   #    as there are CPU cores;
596   #    example:
597   #    com.openexchange.omf.worker.premigration.threads=auto
598   #
599   # 3. a number: the operations are parallelized, with as many thrads in
600   #    parallel as specified with that number
601   #    example:
602   #    com.openexchange.omf.worker.premigration.threads=4
603   #
604   # Optional. Default: auto
605   com.openexchange.omf.worker.premigration.parallel.threads=auto
```

File 5   /opt/open-xchange/etc/omf-feature-mapping.yml

```
1    # Permission and Configuration Cascade migration rules.
2    #
3    # defaultMappings are mandatory but may be empty.
4    # Optionally, per-target mappings or per-targetBrandName can be defined.
5    # Those inherit from the default mappings.
6    #
7    version: 1
8    defaultMappings:
9      # default rules apply to all targets and brands
10     permissionMappings:
11       # applied to each user:
12       # - permissionname: action
13       #     action := on/off
14       #     off := turn it off whether it was set or not
15       #     on := turn it on whether it was set or not
16       # - if not specified, keep as is.
17       #
18       # - all valid permission names:
19       #    webmail: on/off
20       #    calendar: on/off
21       #    contacts: on/off

File 6   /opt/open-xchange/etc/sql-client.d/omf-client-pools.yaml

```
 1  # The top-level key is the identifier of the pool, which can be
 2  # any string of text and is being used by the bundles and applications
 3  # to access that pool configuration.
 4  # Typically, those are fixed or need to be configured in the bundles
 5  # that use this library.
 6  #
 7  # When Java Security Manager support is enabled, files that are referenced
 8  # in these configuration files must be in a directory that is already
 9  # whitelisted, or in a subdirectory thereof, such as
10  # /opt/open-xchange/etc/
11  #
12  # A good candidate would be something along the lines of
13  # /opt/open-xchange/etc/sql-files/
14  #
15  # Otherwise, the filename or its directory must be put into a new .list
16  # file in the folder
17  # /opt/open-xchange/etc/security/
18  # with e.g. the following content:
19  #
20  # file:/etc/trust.jks
```

```
21  #
22  # For a complete list of property values, read https://github.com/brettwooldridge/HikariCP
23  omf-migration:
24    # This property directs HikariCP to use "DriverManager-based" configuration.
25    # We feel that DataSource-based configuration (above) is superior for a variety of
           reasons (see below), but for many deployments there is little significant difference
           .
26    # When using this property with "old" drivers, you may also need to set the
           driverClassName property, but try it first without.
27    # Note that if this property is used, you may still use DataSource properties to
           configure your driver and is in fact recommended over driver parameters specified in
            the URL itself.
28    # Default: none
29    jdbcUrl: ${com.openexchange.omf.worker.sql.migration.url}
30    # This property sets the default authentication username used when obtaining Connections
            from the underlying driver.
31    # Note that for DataSources this works in a very deterministic fashion by calling
           DataSource.getConnection(*username*, password) on the underlying DataSource.
32    # However, for Driver-based configurations, every driver is different.
33    # In the case of Driver-based, HikariCP will use this username property to set a user
           property in the Properties passed to the driver's DriverManager.getConnection(
           jdbcUrl, props) call.
34    # If this is not what you need, skip this method entirely and call addDataSourceProperty
           ("username", ...), for example.
35    # Default: none
36    username: ${com.openexchange.omf.worker.sql.migration.user}
37    # sets the password of the connection
38    password: ${com.openexchange.omf.worker.sql.migration.password}
39    # This property controls the minimum number of idle connections that HikariCP tries to
           maintain in the pool.
40    # If the idle connections dip below this value and total connections in the pool are
           less than maximumPoolSize, HikariCP will make a best effort to add additional
           connections quickly and efficiently.
41    # However, for maximum performance and responsiveness to spike demands, we recommend not
            setting this value and instead allowing HikariCP to act as a fixed size connection
           pool.
42    # Default: same as maximumPoolSize
43    minimumIdle: 0
44    # This property controls the maximum size that the pool is allowed to reach, including
           both idle and in-use connections.
45    # Basically this value will determine the maximum number of actual connections to the
           database backend. A reasonable value for this is best determined by your execution
           environment.
46    # When the pool reaches this size, and no idle connections are available, calls to
           getConnection() will block for up to connectionTimeout milliseconds before timing
           out.
47    # Default: 10
48    maximumPoolSize: 10
49    # This property controls the maximum number of milliseconds that a client
50    # (that's you) will wait for a connection from the pool. If this time is exceeded
51    # without a connection becoming available, a SQLException will be thrown. Lowest
52    # acceptable connection timeout is 250 ms. Default: 30000 (30 seconds)
53    connectionTimeout: 15000
54    # the dataSourceProperties configures the driver configured above using the jdbcUrl
55    # (some) networking related parameters don't seem to work using mysql (what we are using
           ), see
56    # https://github.com/brettwooldridge/HikariCP#popular-datasource-class-names
57    dataSourceProperties:
58      useUnicode: true
