Release Notes OX Drive

v1.0.0

(2014-02-11)

1. Packages shipped with this Release

- OX Drive
  - Version 1.0.0

2. Additional Information

OX Drive delivers smart file and folder synchronization. Based on specially designed clients optimized for a number of device types and operating systems, it enables users to view and edit their documents – anytime, anyplace – and share files with others.

The OX Drive clients have been developed specifically for ease-of-use. Open-Xchange offers clients for iOS, Android, OS X and Windows. These have been designed to take into account the specifications and limitations of the device they are running on. For instance on a smart phone the user interface is scaled to fit the screen size, and upload and download is performed in line with individual bandwidth, mobile data and battery requirements. On desktop devices synchronization is performed as changes are made to documents and files.

Behind the user interface, the OX Drive concept means you can store users' data in-house, leverage external cloud-based storage, or combine both options. For example, you might choose to plug in a cloud solution as a stopgap while you increase your own capacity in line with demand. Or you might outsource storage completely from the start.

3. Benefits and Main Functions

3.1. Features and benefits of OX Drive clients

- Synchronization of files across devices

- File sharing with friends, family and business partners

- Document editing and collaboration when bundled with OX Documents

- View documents on-line without downloading

- Upload photos from mobile devices with Photo stream

- Fully integrated with OX App Suite

- Document management features with automatic version control and simple rollback

4.   Availability

4.1.   Pricing and Availability

Users simply download the right client for their device from the corresponding app store for free. The availability of the different clients depends on the approval process of the platform supplier. Open-Xchange confirm availability via the usual communication channels.

The OX App Suite backend add-on is available with a valid Open-Xchange App Suite license key. Please contact Open-Xchange Sales for further information and pricing details.
