1 Shipped Product and Version

Open-Xchange AppSuite backend 7.4.2-rev39

Open-Xchange AppSuite frontend 7.4.2-rev28

2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2236.

35021 Too may INFO logs generated by OX server RequestWatcherService on crosscheck script

There are some calls that are known as long running and those should not be tracked by the request watcher as long running is a little bit desired. For this we introduced the possibility to define USM calls (identified by path) within the requestwatcher.properties file that will be ignored by the RequestWatcher: SCR 2249.

35073 NPE while parsing Mail with MS-TNEF Attachment

Mail sent with an empty subject was not considered in mail processing (for that case). This has been fixed by handling empty subject within mail processing.

35148 Taskwatcher does not honor long running EAS Requests

Sync commands have not been handled as long running by the RequestWatcher.
Solution: There are some calls that are known as long running and should not be tracked by the request watcher. For this we introduced the possibility to define EAS commands ('com.openexchange.requestwatcher.eas.ignore.cmd' within the requestwatcher.properties file) that will be ignored by the RequestWatcher: SCR 2250.

35234 Language change works only after 2nd login

Completion of concurrent config tree modification was not awaited, but config-cascade JSlob properties were already examined leading to fill up the cache with stale user data. And Modifications to JSlob were held too long in associated cache and there was no trigger to flush its content to database in case a logout is performed.

Solutions: Await concurrent config tree modification completion prior to examine config-cascade JSlob properties. And more aggressive flushing from cache to database, especially when a logout is performed.

35285 Contact image does not show up immediately when set

Missing api-update event when picture upload is ready.
This has been fixed by adding this missing api-update event.

35359 Module mail, action all ignores limit parameter if unseen is given

All messages from a mailbox are retrieved to apply a filter to returned result set.
This has been fixed by filtering the messages through constructing an appropriate search term. Thus the utilized MAL implementation is able to serve that call according to its capabilities/possibilities.

3 Changes relevant for Administrators

3.1 Changes of Configuration Files

Change #2249 Property for ignoring USM requests to be tracked by the RequestWatcher

Added the following property to 'requestwatcher.properties' file to be able to define a set of calls that should be ignored by the RequestWatcher:

```
# Define a comma separated list of USM paths that will be ignored by the  
# request watcher. Hint: each path has to start with a '/'
```

Default value: syncUpdate
com.openexchange.requestwatcher.usm.ignore.path=/syncUpdate

Change #2250 Property for ignoring EAS requests to be tracked by the RequestWatcher

Define a comma separated list of EAS commands that will be ignored by the
request watcher.
Default value: sync, ping
com.openexchange.requestwatcher.eas.ignore.cmd=sync, ping

4 Tests

Not all issues that got resolved with this Patch Release could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported issue when deploying to a staging or production environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

35021, 35073, 35148, 35234, 35285, 35359,
