2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 7.8.3.

49091 Show requests for read receipts setting is not hidden when protected

Configurability for all settings is not available.

Extend checkbox-related code in mail settings pane to consider configurability for this setting.

49781 Email list: email address displayed instead of display name when DISPLAYFROM is enabled

Now show display name if DISPLAYFROM is set.

49864 Full-day appointment will be displayed as a regular 24h appointment on Android

Specific clients rely on a certain order of the EAS protocol elements. <AllDayEvent> shall be sent after <StartTime> ,<EndTime> . Microsoft Exchange Server for example does this.

Now sending <AllDayEvent> after <StartTime> ,<EndTime> to solve this issue.

49979 Guest users don't get deleted

Guest user deletion triggers push listener removal for guests even if they might not have any push listener registered.

Solution: Consider webmail permission before removing push listeners within the user deletion process.

49989 Onboarding Wizard Connect Device Tile does not fit into frame

Max-width were applied on whole container.

This has solved by applying max-width for description only.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

49091, 49781, 49864, 49979, 49989,
