1 Shipped Product and Version

Open-Xchange AppSuite frontend 7.6.1-rev18

2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2430.

37253 No folders shown below "My Folders"

In certain IMAP configurations, folders below "My folders" were not visible anymore, due to a side-effect of a previous bugfix regarding virtual folder updates. This has been solved and extensively tested with various IMAP backends and configurations.

36984 Account recovery dialog not triggered anymore

When externally modifying the users password, access to existing oAuth or IMAP accounts cannot be granted any longer since their credentials are crypted with the users password. This now triggers a "restore" dialog which asks the user to enter the previous password to re-encrypt those credentials with the current password.

36779 Incorrect dutch translations

Some dutch translations regarding E-Mail (compose, archive) have been corrected.

36669 Mailfilter allow to create rules for external mail accounts

The mailfilter settings page allowed to create SIEVE rules to move mails to external IMAP accounts. While those rules are not executed and the mail was just kept in "Inbox" instead, it was quite confusing for users to see their external accounts there. This has been solved by adjusting the folder selector dialog to just show IMAP folders related to the primary mail account.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

37253, 36984, 36779, 36669,
