2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2972.

43230 New "user_alias" table does not maintain UUIDs

Modified the original update task "MigrateAliasUpdateTask" to include a new 'uuid' column in the table 'user_alias' and to migrate the already existing UUIDs from the 'user_attribute' to the 'user_alias' table.

43121 Wrong placed signature on reply or forward when having signature above quoted text

Signature was not displayed above quoted text when replying or forwarding an email with setting: "Add signature above quoted text".

This has been fixed by adding handling for special case when 'above' signature is added when initially reply/forward a mail.

43226 Auto save draft fails on some HTML Mails

mapObject was missing and caused the error when saving HTML mails.

This has been fixed by adding underscore mixin.

443387 Mails w/o external content can show the load-external-images button

Wrong return value in CSS sanitizing routine caused a displayed image button without any function. Solution: Fixed check if CSS content has actually been modified.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

43230, 43121, 43226, 443387,
