2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3521.

47025 Shared mail folders are not displayed

When applying very specific folder permissions, a issue was observed that folders are not show via OX App Suite while being expected to show up. This was caused by a incomplete permission check and got solved by correcting this check.

47575 Modifications to logback configuration re-set

When updating OX App Suite, recent default configurations changes to logback.xml were reset. Packaging now considers those changes and makes sure the defaults are maintained when updating.

48069 UUID invalidated when changing user accounts

When changing a user account, for example aliases, the UUID of all aliases are updated too. This may break references to aliases in external systems. The issue has been solved by maintaining alias UUIDs if they are not affected by the change.

48089 Weekend days were hardly readable

In case the current day is a Sunday, the date label was hardly readable since several shades of red were applied. This has been solved by correcting the priority of shades when displaying the calendar month view.

48109 Special IMAP folders are re-set on first login

When defining special-use flags for IMAP folders, those were not considered when logging in for the first time. The behaviour has been made configurable by change #3524. Now we're considering those pre-defined special-use folders.

48205 Issues when swithing SMTP Auth

When configuring a external mail accounts SMTP credentials as "As incoming mail server" and changing this configuration to specific credentials, the old credentials were maintained. This has been fixed.

48272 New mails are not fetched when updating by pagination

In case a mail arrives while scrolling through the mail list, that mail is not appended to the mail list when refreshing by scrolling. As a follow-up mails loaded via manual reload were visually removed again when scrolling. This has been solved by fixing the related state information.

48343 "Select all" selects more mails than visible

In case more than 30 mails exist at a mailbox, "Select all" would select 31 mails when being triggered multiple times. This has been solved.

3 Changes relevant for Administrators

3.1 Changes of Configuration Files

Change #3524 Configuration to prevent middleware from overwriting special-use flags

Key `com.openexchange.imap.setSpecialUseFlags` (Default: `false`) has been added to define whether the OX middleware is allowed to set special-use IMAP flags. If set to `false`, OX middleware will never set any special-use flags on folders on the imap server. If set to `true` the OX middleware will only set special-use flags if no special-use flag of that type exist yet.

4 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

47025, 47575, 48069, 48089, 48109, 48205, 48272, 48343,
