2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3571.

48109 Reset of special use folders after OX login
The property has not prevented the setmetadata command for existing folders.
Prevent setmetdata for existing folders now.

48748 Distribution list view inconsistent, saving such a list does not work
The error is cause by two update operations on a contact off the distribution list. If a contact off the distribution list is within the addressbook of the user, then the entry within the distribution list will reference this contact. In case the email address referenced by the distribution list is removed the entry within the distribution list is also updated (now empty). If then in a next step the contact is deleted the entry within the distribution list will be changed to a contact without a reference. In this case the mail address within the distribution list will be used, which is still be empty. In this case the distribution list is invalid because of this missing mail address.
The exception message now tells the user which contact is causing the error and therefore he is able to solve the issue himself.

48883 logconf -l com.openexchange.usm does not filter for UID/CID
The logback filtering works in conjunction with the MDC properties, meaning that in order for a log filter to work, the userId, contextId and (optionally) sessionId have to be present in the MDC. In this case, the previous mentioned MDC properties were only applied upon a login request, hence the only DEBUG log entry that was visible in the log was that of the login request.
This has been fixed by applying the MDC properties 'userId', 'contextId' and 'sessionId' (that is the USM session id and not OX session id) to the MDC when getting the USM session from the SessionStorage (which happens on every USM/EAS request).

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
