1 General Information

Open-Xchange is pleased to announce the release of OX Abuse Shield v2.2.0.

OX Abuse Shield provides abuse-prevention for Web Applications (including Webmail), POP, and IMAP. It is integrated with both OX App Suite and Dovecot Pro to prevent login and authentication abuse as well as protecting against brute-force attacks.

The goal of OX Abuse Shield is to detect brute forcing of passwords across many servers, service-sand instances, as well as enforce policy for authentication and authorization. In order to support the real world, brute force detection policy can be tailored to deal with "bulk, but legitimate" users of your service, as well as botnet-wide slow-scans of passwords.

The new OX Abuse Shield v2.2.1 provides the following fix:

- Fix wforce crash in Sibling send thread triggered by syncDB operation

A more detailed overview of the main functions and technical descriptions of OX Abuse Shield can be found at the Whitepaper under: https://software.open-xchange.com/products/weakforced/doc/OX_Whitepaper_OX_Abuse_Shield_2_2_1.pdf

Download and Installation
