# 1 About This Documentation

The following information will help you make better use of the documentation.

- [Who is the target group for this documentation?](#)
- [Which contents are included in the documentation?](#)
- [Which further help is available?](#)

## **Who is the target group for this documentation?**

This documentation is addressed to Groupware users who already worked with the previous Open-Xchange Server 6 version.

## **Which contents are included in the documentation?**

This documentation includes the following information:

- In [Changes](#) you will learn the concept and functionality differences between the Groupware and the Open-Xchange Server 6.
- In [What's New](#) you will learn which functions are new in the Groupware and have not been part of the Open-Xchange Server 6.
- In [Function Comparison](#) you will find the corresponding Groupware function for frequently used Open-Xchange Server 6 functions.

This documentation describes working with a typical Groupware installation and configuration. The installed version and the configuration of your groupware might differ from what is described here.

## **Which further help is available?**

A comprehensive documentation can be found in the user instruction that is available as on-line help and as a PDF document.

## 2 Changes

Learn the essential differences between the Groupware and the Open-Xchange Server 6:

- [New user interface](#)
- [No wizard](#)
- [No hovers](#)
- [Mini calendar](#)
- [Changed and obsolete views](#)
- [Portal squares instead of UWA modules](#)
- [Clear folder tree](#)

### **New user interface**

The user interface has been completely re-designed. It now follows a new concept:

- All essential functions that might be needed are directly accessible.
- The control elements now require less space. Even on end devices with a small screen there is now enough space for a clear content layout.

### **No wizard**

The wizard no longer exists. Settings like setting up external E-Mail accounts are directly available in the settings.

### **No hovers**

The hovers no longer exist. An object's details are now available in the popup window, e.g. in a contact's halo view.

### **Mini calendar**

The mini calendar below the folder tree is no longer displayed. Instead, you can now display a mini calendar by clicking on the date above the calendar sheet in the *Calendar* app.

### **Changed and obsolete views**

Some views no longer exist, e.g. the address card view for contacts. Instead, all relevant data for an object are shown in the display area.

### **Portal squares instead of UWA modules**

The UWA modules no longer exist. Instead, the portal squares can now be configured to display social network contents or RSS feeds.

### **Clear folder tree**

The detailed folder tree has been replaced by an app specific folder tree. That way the folder structure is clearer as only the relevant folders are displayed.

---

## 3 What's New

Learn about the most important new functions in the Groupware:

- [Apps instead of modules](#)
- [Device independent design](#)
- [Portal with social media integration](#)
- [Halo view for contacts](#)
- [E-Mail conversation](#)
- [The app Drive](#)
- [Drag and drop for attachments](#)

### **Apps instead of modules**

The Groupware apps correspond to the Open-Xchange Server 6 modules functions. The interface now has a clearer structure. The usability has been optimized for various end devices.

### **Device independent design**

The Groupware interface is automatically scaled for each device to get the best design and usability on PCs, laptops, tablets, and netbooks.

### **Portal with social media integration**

The Portal not only integrates the access to all apps but also to your social media messages, e.g. on Twitter, LinkedIn, Xing. The order of the Portal squares can be changed with drag and drop.

### **Halo view for contacts**

The halo view opens a popup with all relevant information about a contact:

- addresses, E-Mail addresses, phone numbers
- your current correspondence with this contact
- shared appointments with this contact

The halo view opens if you e.g.:

- click on an E-Mail's sender or recipient
- click on an appointment's or a task's participant

### **E-Mail conversation**

The detail view displays an E-Mail with all corresponding replies. It helps keeping an overview of E-Mail correspondences with the same topic. You can edit all E-Mails of an E-Mail thread at once e.g., forwarding them or moving them to another folder.

### **The app Drive**

This app replaces the former InfoStore, including file versioning, sharing and publishing folders. The following functions have been added:

- In addition to the list view an icon view is now available. The icon view contains a small preview for many files.
- Displaying various Office documents with the Document Viewer
- Displaying pictures as slide show, playing audio and video files

### **Drag and drop for attachments**

You can add a document as attachment to an E-Mail or another groupware object by dragging the document from your operating system's desktop to the groupware window and dropping it there.

---

## 4 Function Comparison

Learn how to access frequently used functions of Open-Xchange Server 6 in the Groupware:

- [E-Mail](#)
- [Address Book \(Contacts\)](#)
- [Calendar](#)
- [Tasks](#)
- [Drive \(InfoStore\)](#)

## 4.1 E-Mail

Function	Open-Xchange Server 6	Groupware
Displaying an E-Mail's content	Select an E-Mail in the h-split or v-split view.	Select an E-Mail from the list. The details are shown in the detail view.
Displaying an E-Mail's source code	Click on the <b>View source</b> button in the panel section <b>E-Mail</b> .	Click on <b>Actions</b> icon  in the toolbar below the menu bar. Click on <b>View source</b> in the menu.
Saving E-Mail attachments	Select an attachment below the detail view. Click on the <b>Save as</b> button in the panel section <b>Attachment</b> .	Click on <b>Download</b> below the header in the detail view.
Composing a new E-Mail	Click the <b>New E-Mail</b> icon in the panel section <b>New</b> .	Click on <b>Compose</b> in the toolbar.
