2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6196.

PLG-380 Recently added group displays in Address Book only after server restart

Recently added group doesn't display in Address Book has been fixed by properly invalidating the group folder mappings after internal group create event.

Affected Package: open-xchange-plugins-contact-storage-group

PLG-384 Occasional wrong results when querying the list of black or white entries

When querying the list of current entries in the blacklist or the whitelist, occasionally the wrong list entries are returned (the whitelist entries for the blacklist, and the opposite), around 6-7% of times. This has been fixed immutability and thread-safety by using final attributes.

Affected Package: open-xchange-plugins-blackwhitelist

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

PLG-380, PLG-384,
