2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5241.

UC-34 PropertyTranslations uses faulty regular expression to detect translations

Property names for translation are matched against a faulty regular expression and are not picked up as translations, resulting in the fallback (English) being used.

This has been solved by adjusting the regular expression that is used to filter for translations in util-custom, specifically in PropertyTranslations.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

UC-34,
