2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4901.

CP-101 Upcoming ABI incompatibility due to OXContextPluginInterface.existsInServer

Customer requirements will cause the addition of a new method in `com.openexchange.admin.plugins.OXContextPluginInterface` which is an interface that is implemented in `Cloud-Plugins (OXCloudServiceContextImpl.java)`.

This has been solved by adding `public void existsInServer(Context ctx, Credentials auth)`

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

CP-101,
