1   Shipped Product and Version

Open-Xchange Cloud Plugins 1.6.10-rev4

Find more information about product versions and releases at `http://oxpedia.org/wiki/index.php?title=AppSuite:Versioning_and_Numbering` and `http://documentation.open-xchange.com/`.

2   Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 1.6.10-rev3.

CP-207   NPE due to missing check whether a BrandEntity object was found in NginxAuthVerifier
Fixed an NPE logging issue which happened when a brand name ("Host" HTTP header value) was used that didn't reference any configured brand in the LDAP tree, which also caused the authentication to fail as expected, but the log entry points to a bug rather than the appropriate message.

CP-212   LDAP Entries not deleted when numusers would go below 0
During the user deletion, in case the mailstore user count is already 0 even though there's still one or more users, the counter will be fixed automatically.

CP-213   changemailstore(name) does not change the MailstoreDN of all corresponding users
Fixed a bug in changemailstore where, when changing the name of the mailstore, the DNs pointing to the mailstore in all corresponding user entries are not changed, which results into users with a broken mailstoreDN (link).

CP-230   Provide Nginx Servlet Auth Password Lookup Without Config Cascade
Master Password configuration is read on a config-cascade view, which causes DB access.
Offer configuration file only lookup for Master Password configuration, which is enabled by default.
The config-cascade version can be enabled with a hidden property
`com.openexchange.cloudplugins.nginx.auth.servlet.lean.masterpw`

3   Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.
To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs
