1 Shipped Product and Version

Open-Xchange AppSuite backend 7.6.0-rev8

2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Release 7.6.0.

33273 Uploading another chunk to a drive file with drive client fails with s3 storage

The S3 implementation was designed to separate the data of each context in a separate S3 bucket. A unique bucket naming restriction as well as a limit of 100 buckets per account break this concept. This has been fixed by switching to a root bucket name per S3 filestore registration and separate context data using fixed prefixes and delimiters.

3 Tests

Not all issues that got resolved with this Patch Release could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported issue when deploying to a staging or production environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

33273,
