2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2496.

34961 Contacts do not synchronize on a HTC with Android 4.4.3

HTC does not take care of the limit for collection lists returned by the server. If a HTC User started a manual resync while the initial sync wasn't finished or if he have a lot of contacts it was possible, that no contact is synced. Now we implemented a new limit to avoid these problems.

36269 OX6 Setup-Assistant lacks support for Google and Xing O-Auth

In the Open-Xchange 6 UI was no input option for Xing and Google O-Auth Authentication. O-Auth Authentication support was added with this bugfix.

36941 Halo view empty without GAB permissions

Without Global Addressbook permissions the detailed Halo-view was empty, even if the contact was saved in an other contact folder. A wrong require check was fixed and the detailview is also displayed without GAB permissions.

37368 Tasks cannot be loaded if title is empty

With App Suite it is not allowed to create a task without a title. But it was possible to create a task with an old UI or an other client. This was adjusted an we are now also displaying tasks without title.

37378 Wrong contact data shown after creating distribution list

After creating a new distribution list the last folder was selected without any contact was marked. Now switching folder to the folder where the distribution list was created.

37408 Rename a folder leads to an error in subfolder

After renaming a parent folder an error was displayed if you navigate to a subfolder. The folder-model, of the renamed folder, was using an old collection of subfolders with wrong ids. Now the folder gets a new collection with correct ids, so subfolders can be used again and no error occur. Has to be verified by customer with SmartDrive.

37505 Shared folder symbol displayed after error message

After sharing a folder to a webmail user an error occurred and behind the foldername the cloud symbol was wrongly displayed. Because sharing a folder to a webmail user is not possible, the cloud symbol is no longer displayed after this error occurred.

37790 Calendar: delete email address with backspace key not working

After typing first letters of email address and choosing an address with your keyboard in the drop-down list, it was impossible to delete entered characters with backspace. After missing keyhandler for backspace was added, it is possible to use the backspace key again.

37809 ERROR Message='Unexpected error: null' is displayed after a mail is marked as spam

When marking a mail as spam the log shows "Unexpected error: null" regarding spam handling. This was fixed by adding null guards to only apply spam logic to non-null references. Has to be verified by customer.

37815 Misalignment of user names in accepted appointment

Missing CSS code led to the displacement, so if an user changed his status and added a comment, the other user was set in one line with the last line of the comment. With implementing new CSS Code the view changed back to the old view, now both users are displayed in the same line.

37938 Primary mail address already exists in this context

Implemented an enhanced error message for the error "Primary mail address already exists in this context" for further investigations.

38067 IMAP folders with special names can not be renamed: "ERROR Unclosed group near index <foldername>"

A folder with special names starting or ending with: "]"—{"}=()" for example cannot be renamed. Now no new folders can be created with those special characters and old existing imap folders can be renamed.

3 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

34961, 36269, 36941, 37368, 37378, 37408, 37505, 37790, 37809, 37815, 37938, 38067,
