2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2496.

38204 Temporary files were not unlinked

The USM routine for temporary file creation didn't close the file descriptor. Therefore every uploaded file was marked as deleted but still existed on the file system until the open xchange service was stopped or restarted. Those unlinked temporary files could lead to storage exhaustion in a short time.

The routine has been corrected to close the file descriptor after creating temporary files and they will be deleted after they are not required anymore.

38207 Resending messages in Outlook failed with some IMAP servers

If a message has been re-sent via Outlook, it was possible that this mail was silently deleted because it used the same ID as the previous one. This happened if the IMAP server has "duplicatesuppression" configuration option active.

To prevent those duplicate IDs, the new parameter `new=true` is used when sending mail.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
