## 2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3214.

### **45163 com.openexchange.oauth.xing = true enforced on upgrade**

An old Softwarechange Request demanded re-enabling of com.openexchange.oauth.xing for 7.6.1 but rpm packaging reenabled it for every upgrade. This has been solved by removing unconditional upgrade.

### **45081 Emoticons not displayed in portal mail widget**

Subject was not processed by Appsuite emoji utility. Solution: Process subject with our emoji utility to display those also on the portal widget.

### **45210 Google drive available without open-xchange-file-storage-googledrive**

Only checked the Oauth capabilities but not the available filestorage services. This has been fixed by also checking available Filestorage services to determine if a filestorage can be added.

### **44888 Groups not shown in "Find a free time period"**

Regression introduced by porting to new "participants view" and group members not expanded correctly if added from appointment edit view. This has been fixed by correctly expanding groups in the two cases mentioned above.

### **45092 Missing translation in mailfilter module**

Added translation for emailfilter.

### **45083 No configuration of guestmode after installation of 7.8.0 UCS**

This was caused by a missing software change request. Now packaging adds new properties during package upgrade process.

### **44809 No-reply transport without authentication not possible**

It was not allowed to specify empty login/password for the no-reply transport configuration. This has been fixed by allowing empty login/password when configuring the no-reply transport.

### **45078 NPE at c.o.publish.CachingLoader\$PublicationKey**

NullPointerException if an user tried to download a publication from a link. This has been solved by adding a nullguard.

### **42752 Vacation "from" field uses unfiltered data from personal contact info**

Erroneous and not RFC822 compliant e-mail address was displayed in the from field. Enhanced the 'from' field of the JSON payload to consider both strings and an array of strings. The array of strings should be a simple JSONArray with length 2, the first element should include the personal part of the e-mail address and the second element the actual e-mail address. If only the e-mail address is available, that should be the only element of the array.

### **3 Tests**

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

### **4 Fixed Bugs**

45163, 45081, 45210, 44888, 45092, 45083, 44809, 45078, 42752,
