## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4791.

### **59158 UI always uses en\_US when logging in with session-tokens**

The always did not wait for a inner deferred to finish which caused the login:success event to be triggered to early just before the user language was set correctly. The UI then falls back to en\_US in each case, but only for initial login.

This has been solved by adjusting token login handler and replacing .always with .then in token login handler success function.

## 3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs
