2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4870.

60017 WebDAV upload overrides context quota and can thus fill up underlying filestore
Proper cleanup in case of runtime exceptions while writing to filestore.

60104 [Backport] FCM Support

Migrated from the legacy GCM to the new FCM (Firebase Cloud Messaging) when sending push notifications to the OX Drive clients on Android.

60212 [Backport] /ajax/folders?action=allVisible does not respect the "com.openexchange.mail.hidePOP3StorageFolders" setting

When an appsuite user has a POP3 secondary account and the "com.openexchange.mail.hidePOP3StorageFolders" setting is configured to true this setting was not respected and POP3 folders were returned as private folders of the primary account.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

60017, 60104, 60212,
