2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4881.

60013 Attachment actions not shown on certain mail

Content type with upper case letters do not pass the attachment check for inlineimages. Made content type check case-insensitive for inlineimages to solve this issue.

60011 Calendar Recurrence when selected with a specific End Date is displaying as Day-1 after saving

The date is stored in utc but was converted to a localized date by momentjs which could lead to a wrong date in some cases.

This has been fixed by converting the rule to a date in utc time to prevent timezone offsets to display a different date.

60274 Login - password length restricted to 100 characters (maxlength="100")

This has been solved by increasing MaxLength for password.

60140 Mail content not displayed

Sanitizer removed attributes needed for mail styling.

This has been solved by improving sanitizer so styles are preserved.

59957 Mail selected after login, might not be visible to user

Selected mail not scrolled into view.

Now scroll selected mail into view to have this mail displayed.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

60013, 60011, 60274, 60140, 59957,
