2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5107.

62212 All day event uses multiple days when printed from monthly view

Not considered the special case for all-day events which were then printed the day before they started and the day after.

This has been solved by filtering correctly for all-day appointments.

62609 Translation issue in Tasks on mobile

Wrong use of plural form.

This has been fixed by using singular form now.

62770 In IE11 opening multiple compose windows can make subject field uneditable

Web accessibility steals the focus on clicking into the subject field on Internet Explorer.

Do not apply refocus on click because this should only happen with keyboard navigation to solve this issue.

62958 Calendar blank from a mobile device

The month view is not rendered if first accessed from the folder tree.

This has been solved by triggering rendering of the month view if it is accessed from the folder tree.

3 Changes relevant for Developers

3.1 Changes of internal APIs

Change #SCR-401 Accept new "no_nested_message" parameter for /mail?action=get end-point

Accept new boolean "no_nested_message" parameter for /mail?action=get end-point. If set to "true" nested messages are handled as regular attachments.

4 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

62212, 62609, 62770, 62958,
