2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5359.

66396 Move context to another filestore using movecontextfilestore is not updating new filestoreID

Trying to delete location/directory from source file storage failed. Due to that, context information has not been properly updated.

Solved by fail-safe deletion of source location in file storage. Note: Filestore identifier of affected contexts need to be manually adjusted in database.

66297 Wrong dutch translation for attachment view

This has been solved by adding comments when "View" should be used as a verb.

66354 Order mails not printed correctly

Custom mail css did not work correctly because of missing class.

This has been fixed by adding the missing class.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

66396, 66297, 66354,
