2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5508.

66622 Confirmation mail of appointment ever in English and Coordinated Universal Time

For events where the (external) organizer is not attending, the timezone is not set explicitly and falls back to the system default.

This has been solved by preferring event timezone in notification mails for external organizer that does not attend the meeting.

68285 Filter rules can have > 2GB if using GB/MB/KB

Unit was not considered when checking size.

This has been solved by adjusting check accordingly.

68435 Error occurs when moving mail from external account to default

Mix-up of folder to account association when composing JSON response.

This has been fixed by accessing folder in proper account.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

66622, 68285, 68435,
