

**Release Notes for Patch Release #5675**  
2020-04-14

**Security Patch Release**

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than fifteen (15) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5651.

### **MWB-205 Possible re-distribution of remotely received cache events through aggregating into a local event**

This has been solved by preventing remotely received being aggregated into another local event and thus re-distributed remotely again though immediate processing of remotely received events (with a separate thread).

### **OXUIB-142 Changing name in webmail not working**

Current value of the From field not respected when checking for customized sender name. This has been fixed by only using fall back value if current value is empty.

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs

MWB-205, OXUIB-142,
