2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5719.

66412 chronos migration "java.lang.IllegalStateException: too many empty recurrence sets"

A bogus series pattern was converted into a recurrence rule that produces no occurrences. Automatically correct invalid "yearly 2" and "monthly 2" patterns during conversion, handle possible IllegalStateException properly.

OXUIB-183 Found no such composition space

There is a little time gap between the POST /compose/:id/attachment to state to have a progress of 100% and the fact, that the upload call resolves. This is the time, the server needs to finally store the attachment somewhere. If the mail is send in exactly this gap, a race condition between sending and attaching the image to the mail might occur.

Wait until the attachment-upload has been resolved before the mail send process can be started.

MWB-273 Unexpected error [Error performing calendar migration in context xxx] caused by NullPointerException

A missing value within the legacy series pattern causes an unhandled exception when trying to convert it into a recurrence rule.

Fall back to "first" week when converting monthly_2/yearly_2 patterns if not specified.

MWB-31 not possible to add multiple totp accounts on same server

No unique information for the TOTP account.

Added the user's login to the TOTP account.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

66412, OXUIB-183, MWB-273, MWB-31,
