## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5888.

### **OXUIB-515 Unable to Create Filter Rule using a Condition**

Wrong timezone was selected when parsing date input.

This has been solved by using default timezone when parsing the date input.

### **MWB-653 Error while editing added mail account - Please enter the following data: primary\_address**

Primary address was unnecessary checked.

Don't require primary address when checking mail account connectivity to solve this issue.

### **OXUIB-485 Context menu on folders are missing 'delete all messages' after marking/unmarking spam**

When spam folder is empty and you move a mail to it (via "mark as spam") folder count was still 0.

This has been solved by adding a refresh of the folder.

### **OXUIB-448 Floating events are not shown correctly in the list view**

Utc timezone was used instead of local time.

This has been fixed by using local time when no timezone is given.

### **MWB-525 'An SQL error occurred: Packet for query is too large' Messages in Groupware Log**

Very big HTML content does not fit into a single packet transferred from Middleware to database due to 'max\_allowed\_packet' setting.

This has been solved by paying respect to 'max\_allowed\_packet' setting and introduced disk-based volatile file cache for storing big message contents that do not fit into database (or into transport packet).

### **MWB-648 OX fakes/uses the wrong sender adress when editing appointments in a shared calendar**

Missing SENDER field and no option to use a separate no-reply account for imip mails.

This has been fixed by adding new configuration parameter to use no-reply account for imip mails and added session user as SENDER to mail headers.

### **MWB-634 Not possible to add google calendar twice**

Check for duplicate account associated with same provider's user identifier fails due to previously performed PW change (w/o restoration) because user-sensitive data can no more be decrypted.

This has been solved by loading OAuth account meta-data w/o secrets (token & secret) when checking for existence.

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environ-

ment. Defects which have not been fully verified, are marked as such. To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## **4 Fixed Bugs**

OXUIB-515, MWB-653, OXUIB-485, OXUIB-448, MWB-525, MWB-648, MWB-634,
