## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 7.10.6.

### **MWB-1351 GDPR backup feature task doesn't seem to work all the time**

Was caused by sporadically timeouts when obtaining a connection to the storage.

Solution: Retry establishing a connection to file storage in case caught exception indicates a timeout while connecting to an HTTP server or waiting for an available connection from connection pool.

### **MWB-1376 Concurrent Update Exception when uploading multiple Attachments during compose**

Retry mechanism circumvented through introduction of client tokens for any reason.

This has been solved by re-enabling retry mechanism.

### **MWB-1352 Update of appointment restricted CAL-4038**

Was caused by too strict permission check when processing CANCEL messages.

Solution: Require delete permissions for targeted user attendee when applying CANCEL messages.

### **OXUIB-963 2fa not working with form/token login anymore**

The first fix was only for form login.

Now this has also been fixed for token login.

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs

MWB-1351, MWB-1376, MWB-1352, OXUIB-963,
