2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6189.

MWB-1893 Serial appointment can not be deleted

Malformed organizer value in change exception leads to problems when deleting "this and future" appointments.

This has been solved by not letting delete operation fail upon malformed change exception data while tracking changes.

OXUIB-2028 English error message in German, French, etc. country settings

This has been solved by adding missing translations.

OXUIB-2026 Server unreachable message shown on single failing API request

Quite outdated list of https status codes that cause the message to appear.

Now the message shown for special cases and http status code '408', '503' and '504'.

OXUIB-2009 Some mail columns possibly slow down mail requests

Column 664 was part of all and list requests. This column is potentially slow on DC side.

This has been fixed by removing the column from all and list requests.

MWB-1874 Emptying email addresses in contacts used in distribution lists leads to incomplete entries

Removed email addresses in contact referenced by distribution list member handled incorrectly.

This has been fixed by removing references to contact in distribution list member when contact's email is cleared.

MWB-1911 "required service com.openexchange.deputy.DeputyService is temporary not available."

Deputy service considered as mandatory in case user replies to a message residing in a shared mail folder.

Solution: Do not require deputy service in case user replies to a message residing in a shared mail folder.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

MWB-1893, OXUIB-2028, OXUIB-2026, OXUIB-2009, MWB-1874, MWB-1911,
