2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6205.

DOCS-4598 Print as PDF does not work in OX Documents in single tab mode

Tab API is used to open a new window for print as pdf. With single tab, the API is not available, hence not opening a new window, but notifying that a new window can't be opened. This has been fixed by moving the secure window open function to a util class that can also be imported without the enabled tab API.

DOCS-4635 Spreadsheet can not be opened - LOADDOCUMENT_CANNOT_RETRIEVE_OPERATIONS_ERROR

There was a problem when parsing negative durations as defined in <https://www.w3.org/TR/xmlschema11-2/#duration>
Now using java time implementation to parse duration values to solve this.

OXUIB-2096 Connection security shows 'None' in UI for an internal account even if connection is secure

UI only knows settings of provisioned state.
This has been solved by hiding 'Connection security' settings if primary or secondary account or if set to false.

OXUIB-2069 Editing personal data has no immediate effect

Sender collection was not properly updated.
This has been fixed by triggering update to get the current display name.

OXUIB-2066 E-Mail statistics sometimes empty

There is a request limit set by middleware while fetching all mails that leads to an error.
This has been solved by considering the limit and only fetch mails within the range of the setting 'mailFetchLimit'.

OXUIB-2043 Pagination broken in share/permission dialog

This was caused by a scroll handler that loads additional entries.
This has been fixed by supporting scrolling on the dialog as well to trigger paging.

MWB-1946 Add missing option to change log directory for oxsysreport

Customers tend to change the default OX log directory and as a result, the logs are missing inside the support tarball.
Providing a new optional parameter which defaults to the old behavior: `oxsysreport --ox-log-dir '/my/changed/log/path'`

OXUIB-1306 Scheduling: Participants and time slot lines are not aligned

This was caused by broken css for compact mode.
Fixed this broken css to solve the issue.

MWB-1836 Wrong times for calendar appointments created on day of timezone change

Problems in Connector/J when storing timestamps on DST shifts.

This has been solved by configuring `useLegacyDatetimeCode: false` by default in `dbconnector.yaml`

3 Changes relevant for Operators

3.1 Changes of Configuration Files

Change #SCR-1169 New Parameter "useLegacyDatetimeCode" in "dbconnector.yaml"

In order to work around issues in Connector/J that may occur when using DATETIME values from DST switch days, the following new database connection parameter is introduced within the configuration file `dbconnector.yaml`: `useLegacyDatetimeCode: false`

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs
