## 2 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 1.2.0-rev5. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

### **DMF-139 Duplicate entry archiver when installing 1.2.0-rev5**

Status: Fixed

Root Cause Description:

`{DenormalizeUserDataCustomSqlChange}` iterates over every table that starts with `{{journal}}` and erroneously creates the table `{{locks}}` and inserts a value in that table within the loop, instead of performing it outside of the loop.

Solution Description:

Modify the implementation to perform the creation of and insert into the `{{locks}}` table outside of the loop that iterates over the `{{journal*}}` tables.

Severity: 3

Components: Scheduler

Affected Packages: open-xchange-dmf-scheduler

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs
