

# Release Notes for Release Dovecot Pro 2.2.21.2

---

## 1. Shipped Products and Versions

Dovecot Pro 2.2.21.2

Including: Object Storage Plug-In

## 2. Important Changes and Bugs fixed since previous Public Release

### 2.1. Dovecot Pro 2.2.21.2 Core

- virtual plugin: Added support for filtering mailboxes by METADATA entries.
  - imapc: Fixed escaping/unescaping mailbox names. This fixes accessing mailbox names with '%' character.
  - dsync: Fixed syncing subscription state with doveadm backup.
  - quota: Namespace filtering (e.g. ns=prefix setting) wasn't done for dict and count backends.
  - quota-clone: Fixed a crash sometimes when closing mailbox.
  - autoexpunge: Mails weren't always expunged when they should have been.
  - autoexpunge: Changed autoexpunging to be done only by IMAP, POP3 and LMTP (and not e.g. by doveadm)
  - auth: If auth caching was enabled, %variables in passdb/userdb { override\_fields } and LDAP pass/user\_attrs were kept cached, possibly causing old %variable expansion to be used.
  - imap: Fixed a crash when handling commands pipelined just before running IDLE.
  - fts-solr: Multi-word queries in v2.2.21.1 defaulted to OR operator instead of AND, causing e.g. "[user@example.com](#)" search word to be expanded to "user OR example OR com", which matched too many mails.

## 2.2. Oboject Storage Plug-In

- No changes

## 3. Tests

The Dovecot QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
