

# Release Notes for Dovecot Pro Patch release 2.2.27.3

---

## 1. Shipped Products and Versions

Dovecot Pro 2.2.27.3

## 2. Important Changes and Bugs fixed since previous Public Release

### 2.1. Dovecot Pro Core

- **BUG 51499:** The new vsize feature in v2.2.27.2 was excessively writing to index files. Every time a mail was closed, its size was updated to the index even though it was already there. This resulted in a lot of unnecessary disk IO.
  - **FIX:** lib-storage: Put vsize in index only if it's not there
- **BUG 51497:** passsdb running in auth-worker returned "Requested .. scheme, but we have a NULL password" even though credentials were already returned by a previous passsdb.
  - **FIX:** auth: Handle delayed credentials identically in auth-workers

## 3. Tests

The Dovecot QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
