Release Notes for Dovecot Pro Patch release 2.2.33.4

1. Shipped Products and Versions

Dovecot Pro 2.2.33.4
To fix regression found in 2.3.33.3 Release

1.1. Dovecot Pro Core

- **BUG DOV-1573:** v2.2.33.3 regression: If right-side director disconnection was detected while writing to it, or if the output buffer got full, the director was disconnected, but not automatically reconnected. This resulted in the ring being desynced until a manual restart was run. Usually director disconnections are detected while reading from it, so this didn't happen always.
    - o **FIX:** director: Reconnect after detecting a write failure to director
    - o **FIX:** director: Make sure a missing right-side connection is always reconnected

2. Tests

The Dovecot QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
