2. Release Highlights

This release fixes two POP3 regressions introduced in v2.3.11.

Summary of Highlights

- Fix: POP-login didn't handle commands in multiple IP packets properly
- Fix: `pop3_deleted_flag` setting was broken

3. Upgrade Information

No Changes

4. Known Issues

- Not all Dovecot 2.2.x logging has been converted to Dovecot 2.3.x events, so newer logging/metrics configuration will not work on these older log entries.

5. Detailed Changes

5.1. OX Dovecot Pro Core

- **ISSUE DOV-4040:** v2.3.11.1 regression: pop3-login didn't handle commands in multiple IP packets properly. This mainly affected large XCLIENT commands or a large SASL initial response parameter in the AUTH command.
- **ISSUE DOV-4051:** v2.3.11 regression: `pop3_deleted_flag` setting was broken, causing: Panic: file seq-range-array.c: line 472 (seq_range_array_invert): assertion failed: (range[count-1].seq2 <= max_seq).

5.2. Object Storage (obox) Plug-in

No Changes

5.3. Full Text Search (fts) Plug-in

No Changes

5.4. Pigeonhole (sieve) Plug-in

No Changes

5.5. OX Engage (imap-injection) Plug-in

No Changes

5.6. Chat Over Imap (coi) Plug-in [beta]

No Changes

5.7. Intercept (intercept) Plug-in

No Changes

6. Tests

The QA team has successfully verified all issue fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
