1 General Information

Open-Xchange is pleased to announce the release of OX Drive app v2.2.0 for Apple macOS.

OX Drive enables users to synchronize files between a variety of devices (phones, tablets and laptops) and OX App Suite. OX Drive consists of two elements: the OX Drive component that is built into OX App Suite and the native OX Drive Apps. These are designed to work together and ensure high usability and a seamless customer experience on different devices.

In this version, besides some bug fixes and enhanced error reporting, we have re-designed the sharing experience. The dialogue for inviting others to access and edit content on OX Drive has a more intuitive layout: It now differentiates more clearly between existing and new invites. When creating or editing sharing links, users are now able to define the expiration date arbitrarily by using the new date picker.

For accounts with limited storage, the new version supports users in handling the situation that their local Drive directory exceeds the allowed size: The corresponding notification allows them to directly access their Trash folder in Appsuite and empty it to gain back space.

For details on how to install and update OX Drive please refer to the instructions here: http://oxpedia.org/wiki/index.php?title=AppSuite:OX_Drive.
