2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4742.

58854 Added userIds do not have any PGP hashed packets set, resulting in 3DES being used for encryption

PGP attaches data to the signatures used to create new userIds. Not only is the userId being certified, but the preferences of the user are also saved, as well as key information.

This has been solved by adding update routing for public keys. Checks for missing preferences/MDC flag and updates. Also fixed userId function to copy previous settings.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

58854,
