2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6138.

GUARD-325 Popup for public keys of recipients too small

Was caused by fix width.

Changed to variable based on screen size to solve this. Set to 75%.

GUARD-355 Removing key from "Autocrypt Keys" results in JS error

Was caused by transition deployment.

Was solved by adding response from 2.10.6.

GUARD-352 "releasing" a new guard key for new recipients results in "requested key can not be found"

Key ids were double URL encoded.

This has been solved by removing extra encoding.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

GUARD-325, GUARD-355, GUARD-352,
