## 1 General Information

### OX Guard v2.10.3 for OX App Suite v7.10.3

With this new release, Open-Xchange integrates OX Guard even more closely with OX App Suite v7.10.3, particularly the signature verification check. Enhancements to OX Guard in this release include:

- Improved notification by signature verification check  
When receiving a signed email, if the public key is missing, or unavailable, OX Guard is unable to verify the signature. Now the OX App Suite frontend provides a better, readable, text notification "Unable to verify signature. Missing public key." in the main area of the received mail.
- Some adaptations to support OX App Suite v7.10.3  
With this new release Open-Xchange has made some small changes to integrate OX Guard even more closely with OX App Suite

#### General Information – Please Note

- Open-Xchange encourages administrators to regularly update to the latest available release. To ensure a stable and up to date environment please note the different versions supported. An overview of the latest supported Major, Minor and Public Patch Releases can be found in the OXpedia at: [https://oxpedia.org/wiki/index.php?title=AppSuite:Version\\_Support\\_Committment](https://oxpedia.org/wiki/index.php?title=AppSuite:Version_Support_Committment)

## 2 Shipped Product and Version

Open-Xchange App Suite Guard 2.10.3-rev3

## 3 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 2.10.2. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

#### **66069 Public Key Without Email Within <> Fails To Import**

Search for the email address in last occurring to solve this issue.

#### **65408 Guard guest cannot access mails**

When `mail.loginSource=name`, the `userLoginInfo` is returned for `mailConfig.login`, which for Guests is null, which throws Missing error.

Fixed by null value allowed for Guests.

#### **66393 Reset password for guest account fails**

Wording changes of the password login process.

## 4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environ-

ment. Defects which have not been fully verified, are marked as such. To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## **5 Fixed Bugs**
