2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Release 1.2.0.

40454 Delays in call routing

Sometimes it took up to 20 seconds till a call was established between parties. Most often on group conversations and a join / rejoin event. The delay in call-setup is mostly seen when someone has more network interfaces and some of them are active but not connected.

This delay is lowered by some second, but please note that the delay won't be completely gone, it's just lowered to 2 seconds.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
