2   Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 2.1.0-rev34. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

OMF-767   filestore id of context admin is not replaced with a valid target filestore id
Fix the filestore ID of the context admin when migrated to the target.
Status: Fixed
Root Cause Description:

{{c.o.o.worker.files.impl.FileDAO.updateFilestoreReferences()}} does not update the filestore id of the context admin in cutover, since that's not listed in the {{user_mapping}} table in the migration database. As a result, the original filestore id from source is kept.

Solution Description:

Always set the filestore id of the context admin to 0, which means it belongs to the context filestore.

Severity: 3
Components: Worker Files
Affected Packages: open-xchange-omf-worker

3   Changes relevant for Operators

3.1   Changes of Behavior

Change #OMF-766   Add Kafka headers in Worker responses
Status: Done
Resolution: Done
Components: Worker General
Affected Packages: open-xchange-omf-worker

4   Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

    To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5   Fixed Bugs
